

VINUNIVERSITY

Lab 01: Getting Started With Python

Week 01 - Sep 23, 2026

College of Engineering and Computer Science, Introduction to Programming

Submission Instructions:

- This individual lab practice will typically be assigned in the laboratory (computer lab). You can use your computer, but **all quizzes and practical exams will be performed with a lab computer**.
- Your code and functions/modules should be appropriately commented. However, try to avoid making your code overly busy (e.g., include a comment on every line).
- Variables and functions should have meaningful names, and code should be organized into function-s/methods where appropriate.
- Academic honesty is required in all work you submit to be graded. You should **NOT** copy or share your code with other students to avoid plagiarism issues.
- The code should be written in Python 3.* (e.g., 3.7, 3.8, 3.9, etc.) and **Codeforces** platform will be used for lab practices.
- You should upload your .py file(s) to Canvas **before the end of the lab session**. We expect you to submit your code **on both Codeforces and Canvas** (the code should be the same on both platforms); otherwise, it will not be graded if it is missing from either platform.
- Submit a separate **.py** file for each Lab problem with the following naming format: **LabX_PY_Z.py**, where **X**, **Y**, **Z** identify the lab index, problem index, and student ID, respectively.
- Late submission of lab practice will be penalized according to the Course Policy.

Python IDE and MiniConda Installation Instructions

To ensure a smooth experience in this course, please follow the instructions below to pre-download the recommended integrated development environments (IDE) and MiniConda for Python.

PyCharm: We recommend using PyCharm as your primary IDE. You can download it by selecting your operating system (Windows, macOS, or Linux) and choosing the Community (Free) Version. Follow the installation guide [PyCharm Guide] for assistance.

MiniConda Installation: For MiniConda installation, please watch the video tutorial for Windows here. If you are using a different operating system, you can find installation instructions in this video.

PyCharm IDE and Anaconda Installation: Refer to this video tutorial [PyCharm IDE and Anaconda Installation] for detailed installation instructions. Please note that it is recommended to install **MiniConda** instead of Anaconda because it is a minimal installer. The installation process is the same for both MiniConda and Anaconda. First, install MiniConda and then proceed with the PyCharm installation.

Jupyter Notebook Setup: For setting up Jupyter Notebook, please watch this video tutorial.

Python Programming Practice with Codeforces Platform

Students are required to create an account on the Codeforces platform to practice Python programming.

All of the lab practices will be posted on the Codeforces platform. Students can find the lab practice link in the following link <https://comp1010fall2026.contest.codeforces.com>.

Problem 1: Printing “Hello World!”

Write a Python program that prints the text “Hello World!”.

Input

- No input is required for this problem.

Output

- Output the text: Hello World!

Examples

Output:
Hello World!

Problem 2: Printing a Welcome Message

Write a Python program that prints the text “Welcome to VinUniversity.”.

Input

- No input is required for this problem.

Output

- Output the text: Welcome to VinUniversity.

Examples

Output:

Welcome to VinUniversity.

Problem 3: Calculating Age

Write a Python program that asks the user to enter their year of birth, calculates their age, and then prints a message like “Your age is ...”. Assume the current year is **2026**.

Input

- A single integer on one line: the user’s year of birth.

Output

- Print a message of the form: Your age is X. where X is the calculated age in 2026.

Examples

```
Input 1:
2004
Output 1:
Your age is 22.
```

```
Input 2:
2000
Output 2:
Your age is 26.
```
